

6 Any other comments about Dr. Yawen's teaching?

- 1) Excellent replies to emails. I have sent her an email after every lecture and she has taken lots of time to answer and address my concerns.
Her lectures are great with entertaining and informative videos. Her use of the document camera is engaging and allows her to accurately accentuate what she wants to talk about.
- 7) Very enthusiastic and presents content in an understanding manner
- 9) She used lots of different tools for teaching meaning I could see things in lots of different ways to help my understanding. This is quite helpful when one way doesn't work but another does.
- 11) Too many videos explaining a topic that she ends up explaining after the video
- 12) I like the way she prints the notes and draws on them, very easy to follow. Things are well explained.
- 14) No
- 15) Sometimes she plays videos made by other people in the class. I don't find them very helpful. I wish she would explain in her own words, then perhaps link to those videos as additional resources on the course page if people didn't understand at first.
- 20) she has a very positive attitude which makes the course enjoyable.
- 21) I am not a fan of the paper lecture slides. Would prefer the annotations and writing on the lecture slides happen electronically because sometimes it is annoying when she has to flick through all the paper to find a specific slide.
- 23) I found it quite interesting to see how she uses slides printed paper and have the camera displayed the lecture. This let her correct any mistakes and point at what she is referring to, though sometimes her head does get in the way. I would still prefer to have the slides be digital since the text does tend to be a bit bigger and easier to see.
- 24) I quite like the lectures, and the extra videos she plays add something different which I like
