

Whoever You Teach or Train . . .

# TURN THEM Increase Lesson Impact With

POLYTRAIN from PROGENI helps guarantee effective, economic and efficient training course preparation and extends the reach and scope of every instructional resource. The most simple or sophisticated results are yours, at the flick of a switch, without any previous computer 'know-how' from trainer or user.

POLYTRAIN combines POLY colour computer consoles and network control with POLYTOOLS — powerful, dedicated courseware authoring packages. It enables you to slash overhead time costs by automating both lesson-by-lesson support and the preparation of completely customised training packages. POLYTRAIN also brings distributed training; compact, portable units are easily transferred to remote sites — staff or trainees suffer a minimum of relocation material (on the same computer used for delivery, if necessary). PROGENI supplies full familiarisation and user training to get you started. Conversely, POLYTRAIN training personnel are themselves experienced at working with you to develop customised

instructional systems software covering the complete learning needs of your organisation. POLYTRAIN creates materials that you, the instructor or teacher, really need. Customised, self-paced learning and remedial teaching techniques which ensure instruction is tailored to the audience. (POLYTRAIN even includes a course vetting procedure to evaluate success in reaching objectives). Education, Industry, Commerce, Government — rapid change in our environment is leading to a pronounced emphasis on training advancement. The ability to be trained well is fundamental to personal and institutional success. POLYTRAIN offers the essential support.

Simple, English language words activate these powerful software aids — no previous computer programming skills necessary!

# POLYTRAIN USES POLYPOWER" TO THE FULL . . .

The POLYTRAIN system is totally flexible, always appropriate to the task. The consoles each contain a full 35cm colour monitor, 64K RAM, optionally, 128K RAM is available, 20K ROM, and use a standard keyboard with special training keys inbuilt. A RS232C port can be fitted to individual terminals.

The Proteus network control system allows multiple users to access courseware (up to 32 work-stations to each drive system). Multiple drives may be used together to give a standalone capacity of up to 2.4 Megabytes with floppy disks. Three RS232C port and a Centronics compatible port are standard on the Proteus.

The POLYTRAIN system can be made to communicate by Modem or other means to mainframe computers, allowing up-line and down-line loading of courseware, student results and test evaluations (POLYTRAIN work stations double for both trainee and authoring uses). Peripherals (such as video tape and disk units, printers and drawing devices) can be added as required.

POLY, POLYTRAIN and POLYTOOLS are advanced instructional services available only from the Learning Division of
